Home Elevators

Luxury and convenience in your home

Japan Quality

Our home elevators developed in Japan are designed to fit into your home and villas, to add value with a wide range of advanced design.

Space-Saving

Our Machine-Room-Less design offers minimal overhead, pit depth and shaft dimension.

Single-Phase Power Supply Design

Operating on Single-phase 210-240V which is commonly available in your home and villas.

Earthquake-Resistant Design

Our home elevators complying with The Building Standard Law of Japan conform to the strength section of Japan Earthquake-Resistant standard.

User-Friendly

Our home elevators are designed to ensure the safety and comfort for all people: Providing automatic doors and multi-beam door sensors as standard on all models helps older people and people with disabilities use our home elevator more safely and comfortably.

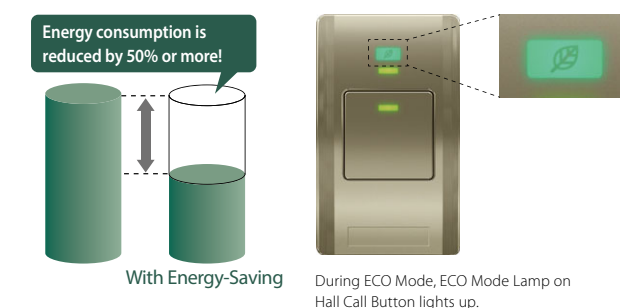

More Comfort Atmosphere

As our home elevators apply rope type, less odors and no worry for oil leakages which may happen with hydraulic lifts.

Energy-Saving (ECO-Friendly)

The car lighting and electric fan are automatically turned off and standby power is significantly reduced (ECO Mode)

In addition, LED lighting and high efficiently transformer are applied as standard.

Safety Features

Our home elevators are always provided with a wide range of safety features also found in commercial elevators.

Automatic Rescue Device for Power Failure Standard

Upon electric power supply failure, by using a rechargeable battery, a car automatically moves to the nearest lower floor (Standard) or bottom floor (Optional) and doors open for the safe evacuation of passengers.

Multi-Beam Door Sensor Standard

Multiple infrared light beams cover the door height range of 10mm to 1580mm from the floor level to detect passengers or objects. When any of the beams are blocked, the closing doors immediately reverse to re-open safely.

Overload Detection System Standard

When the car is overloaded, a buzzer sounds and the car does not leave that floor until enough passengers exit the car for the safety. After enough passengers exit the car, the buzzer stops and the car leaves that floor.

Next Drive Operation Standard

If the elevator doors do not open fully at a destination floor, the doors close, and car automatically moves to the next or nearest floor where the doors open.

Nearest Landing Operation for Minor Trouble Standard

If a car has stopped between floors due to some equipment malfunction, the controller checks the cause, and if it is considered safe to move the car, the car will move to nearest floor at a low speed and the door will open.

Car Emergency Lighting Standard

Upon electric power supply failure, Car Emergency Lighting automatically turns on immediately and provides minimum level of lighting within a car by the rechargeable battery.

Emergency Bell Button Standard

A bell located on the top of the car sounds while the button on Car Operating Panel is being pressed. This button alerts persons inside the house.

Modular Jack (for Landline Phone) Standard

Modular Jack is provided in the car for easy installation of a landline phone (provided by customers) that enables passengers to notify or communicate directly with outside.

- *It is highly recommended to provide the landline phone in the car to call for help in case of emergency.
- *Instead of providing the landline phone, a mobile phone can be kept in the car all the time because USB Power Supply enables the mobile phone to be charged.
- *Make sure that outside call over the landline phone or mobile phone is working in advance.

Comfort features

Our home elevators offer a wide range of comfort features for your home and villas.

Extending Door Opening Time Standard

Door opening time can be extended by 3 minutes by pressing Door Open Button on Car Operating Panel or Hall Call Button while the doors are open.

USB Power Supply (Type-A/DC5V 2.4A) Standard

USB charging port can be used for various purposes (such as fan, aroma diffuser and air cleaners provided by Customers)

Management Key Switch Standard

Management Key Switch installed at bottom floor deactivates the elevator. For example, owner can take the elevator out of service manually with this switch before leaving the house to prevent children from playing with the elevator.

One Additional Management Key Switch Optional

One Additional Management Key Switch can be applied at any floor other than bottom floor. For example, if Management Key Switch is applied at ground floor (main entrance) and basement floor (garage), owner can more conveniently switch to disable/able the elevator.

Bleep Button Optional

Electric tone sounds to recognize that Hall Call Button or button on Car Operating Panel is pressed.

Electric Fan Optional

Electric Fan on the car ceiling blows the air to keep inside of the car clean.

Car Arrival Chime Optional

Electric chime sounds to announce car arriving before landing on the floor.

Car Indicator Optional

Car Indicator displays information on the car position and operating status clearly.

Hall Position Indicator Optional

Users can easily know the car position and travel direction by clear and big indicator.

100mm Higher Car Ceiling Height and Entrance Height

Car ceiling height and entrance height can be higher by 100mm to feel comfortable atmosphere.

SHA240G: Standard

*Standard: Car ceiling height: 2100mm
Entrance height: 2000mm

Others: Optional

*Standard: Car ceiling height: 2000mm
Entrance height: 1900mm
Optional: Car ceiling height: 2100mm
Entrance height: 2000mm

*Entrance Door Frame in this image is partially covered by building walls.
